4. Data Sources & Methodology

1. Executive Summary

This report presents a comprehensive SEO audit of **podman-container-tools/podman (page)** for a **SaaS / Developer Tool (repo detail page)** site, generated on August 12, 2026. Findings combine technical, content, schema, performance, visual, and search-readiness evidence as available.

74/100

SEO HEALTH SCORE

Critical Issues Found:

1. **Info:** High: FAQ schema contains an impossible merge rate (6878.9%) vs 68.8% shown on page
2. **Info:** High: Lorem ipsum placeholder copy live in AI Maintainer Vibe Check section
3. **Info:** High: aggregateRating (32,544 ratings) appears PR-derived, not genuine user votes
4. **Info:** Medium: 'No active GitHub maintainers found' — Podman reviews on Gerrit, GitHub data empty
5. **Info:** Medium: Contributor NPS shows DETRACTOR -12 on an encouragement page

Quick Wins:

1. Fix FAQ merge rate units (divide by 100) in the schema generator
2. Replace lorem ipsum with real copy or hide the gated section
3. Re-label or remove aggregateRating unless user-vote backed
4. Add related-repo internal links
5. Handle Gerrit-based repos gracefully (no fake 'no maintainers' signal)

2. Audit Categories

2.1 On-Page SEO

Score: 72/100

What Works

- Title (59 chars, keyword-led): 'podman-container-tools/podman C-Rank (S Tier) - Opendoor'
- Meta description 163 chars with numeric proof point (C-Rank 70.7)
- Single H1 matching intent; H2/H3 hierarchy present; self-referencing canonical
- Clean URL slug, no parameters
- Correct GitHub attribution (containers/podman 301s to podman-container-tools/podman)

Findings

H1 uses raw slug instead of natural brand text Low

H1 'podman-container-tools/podman' matches the URL slug; natural-language H1 ('Podman - Welcoming Container Runtime') would improve readability while keeping slug in URL/title.

Recommendation: Consider a brand-led H1 with the slug retained in title tag and canonical.

Thin internal linking from detail pages Medium

Only 4 language hub links + footer nav. No related-repo or 'similar welcoming repos' links.

Recommendation: Add 3-6 related Go repo links (same C-Rank band) to distribute internal link equity.

2.2 Content Quality

Score: 78/100

What Works

- Real objective metrics: 68.8% merge, 54.8% first-timer, 4 days+ response, cNPS
- Information density 1.0, filler 0, quality 94/100 (content_quality tool)
- FAQ answers genuinely useful for contributors
- Fresh: publication_date 2026-08-12

Findings

Lorem ipsum placeholder copy is publicly visible High

AI Maintainer Vibe Check section renders 'Lorem ipsum dolor sit amet', 'Warmth Score X.X/10', 'Patience Score X.X/10', 'Nitpick Rate XX%'. Visible to visitors and crawlers.

Recommendation: Populate with real maintainer-analysis copy, or hide the section until data exists. Never ship placeholders.

Gated content behind GitHub sign-in Medium

Full PR guidelines/checklist require GitHub sign-in; only the intro text is crawlable.

Recommendation: Render the substantive guidance statically (SSR) for crawlability; gate only interactive features.

Visible text is thin (~779 words) Medium

Metrics + FAQ carry the page; narrative content is minimal.

Recommendation: Add a natural-language 'About contributing to Podman' paragraph with context about Gerrit-based workflow.

'No active GitHub maintainers found' is a false negative for Gerrit projects Medium

Podman reviews on Gerrit, not GitHub. Displaying 'No active maintainers' is misleading and reads as broken to users/LLMs.

Recommendation: Detect Gerrit-based repos (or maintainers via commit activity) and label the metric 'GitHub-based review activity' or enrich from Gerrit.

2.3 Technical

Score: 76/100

What Works

- SSR/ISR Next.js, status 200, no console errors, not SPA
- Canonical self-referencing, no robots meta (indexable)
- Full OG + Twitter cards with dynamic 1200x630 image
- Preloads for fonts, avatar, and badge
- X-Content-Type-Options: nosniff

Findings

HSTS sends max-age=0 Medium

Site-wide Strict-Transport-Security max-age=0 disables HSTS despite preload flag.

Recommendation: Set max-age=31536000 after HTTPS stability; add CSP/X-Frame-Options/Referrer-Policy.

CWV not measured Medium

PSI rate-limited site-wide; no lab or field CWV (INP/LCP/CLS) data.

Recommendation: Re-run pagespeed_check after quota reset; monitor CrUX.

2.4 Schema

Score: 62/100

What Works

- Valid JSON-LD: SoftwareSourceCode + aggregateRating, FAQPage, BreadcrumbList
- Breadcrumb path 'Home > Go Good First Issues > repo' is contextually correct
- All blocks parse as valid JSON

Findings

FAQ schema has impossible data: 6878.9% merge rate High

FAQPage answer: 'The external pull request merge rate ... is 6878.9%.' Page shows 68.8%. A >100% merge rate is impossible; looks like scraped or unit-miscalculated data. Google may flag misleading structured data.

Recommendation: Find the DB field feeding the FAQ answer and fix units (×100 bug). Verify each FAQ value equals page-rendered value.

aggregateRating not backed by genuine user votes High

ratingValue 3.536 / ratingCount 32,544 derived from PR statistics, not user ratings. Violates Google review-snippet guidelines (ratings must be genuine user ratings).

Recommendation: Either collect real user ratings or remove aggregateRating from SoftwareSourceCode and expose metrics as custom schema/non-review properties.

Site-level WebApplication block repeated on detail page Low

Homepage WebApplication (same name/url/description) duplicated on repo pages.

Recommendation: Render WebApplication only on homepage.

2.5 Images

Score: 80/100

What Works

- Alt text on avatar ('podman-container-tools') and badge
- Badge SVG has explicit width/height (280x28)
- Dynamic OG image 1200x630 PNG with alt
- Avatar + badge preloaded

Findings

Avatar lacks width/height Low

github avatar img has no width/height attributes (CLS risk).

Recommendation: Set explicit dimensions or aspect-ratio CSS.

---

3. Action Plan

Phase 1: Data Integrity Week 1

- Fix FAQ merge-rate value (6878.9% -> 68.8%) at the data source
- Remove or re-label aggregateRating unless user votes back it
- Remove lorem ipsum placeholder copy from AI Maintainer Vibe Check

Phase 2: Signals Weeks 2-3

- Handle Gerrit-based repos: fix 'No active maintainers' false negative
- Review cNPS formula producing DETRACTOR -12 for an S-tier repo
- Add related-repo internal links

Phase 3: Content & Scale Month 2

- Add static narrative content (crawlable, not gated)
- Fix HSTS max-age; add security headers
- Re-run page audit to verify FAQ/rating corrections

Data Sources & Methodology

Source	Description	Update Frequency
PageSpeed Insights API	Lighthouse lab audit (mobile emulation, Moto G Power, slow 4G)	Real-time
Chrome UX Report (CrUX)	28-day rolling field data from real Chrome users	Daily ~04:00 UTC
CrUX History API	25-week p75 trend data per metric	Weekly
Google Search Console	Search Analytics (clicks, impressions, CTR, position)	2-3 day lag
URL Inspection API	Per-URL index status, coverage state, crawl info	Real-time (2,000/day)
